A
Equilibrium branches
Equilibrium damage a^*
Interface occupancy θ
High-damage stable
Low-damage stable
Unstable
Frozen-pool threshold
Bistability
B
Clearance and occupancy
Occupancy threshold
Oligomer clearance c_Y
Frozen-pool threshold
Low-damage fold
Low-damage state exists
Boundary separation
C
Two attractors at $\theta = 0.95$
Damage a
Time (model units)
Healthy initial state
Diseased initial state
D
Continuous quasi-steady reduction
1e−1
Reduced potential $\Phi(a)$
Damage coordinate a
$\theta = 0.00$
$\theta = 0.65$
$\theta = 0.95$
